TECHNICAL SKILLS

Backend & Data: C#, .NET Core, ASP.NET Core, Web API, REST APIs, SQL, business logic, data access, authentication, authorization, validation, asynchronous workflows, caching, reporting.

Architecture & Quality: Object-oriented programming, design patterns, SOLID principles, clean code, unit and integration testing, code reviews, troubleshooting, technical documentation, SDLC, CI/CD.

Cloud & Operations: Microsoft Azure, AWS Lambda, DynamoDB, S3, EC2, Azure Application Insights, performance profiling, query optimization, production support.

Security & Collaboration: Secure coding, XSS prevention, dependency-vulnerability remediation, Git, GitHub Actions, Azure Boards, Agile/Scrum, stakeholder communication, mentoring.

WORK EXPERIENCE

Senior Software Engineer, Lumovy Technology Solutions (Client: Microsoft)

March 2024 - Present | *Remote*

Project: Cascade Content Studio - Enterprise Content Platform

- Designed and developed C#/.NET and ASP.NET Core backend services for content generation and automated evaluation, implementing secure REST APIs, business logic, and SQL data access.
- Developed 100+ REST APIs and backend services with reusable architecture for authentication, authorization, validation, asynchronous workflows, caching, and reporting; supported a platform handling 10M-100M requests per month at 99.99% uptime.
- Profiled production workloads, optimized queries, and refactored bottlenecks, improving application performance by 40% and reducing monthly infrastructure costs by $2,000-$10,000+.
- Instrumented Azure Application Insights telemetry to measure execution time across workflow steps, identify bottlenecks, and guide data-driven performance improvements.
- Collaborated with product managers, stakeholders, engineers, designers, QA, and DevOps in a team of 10+ to define requirements and deliver enterprise solutions in two-week Agile sprints.
- Led code reviews and mentored eight engineers on clean code, SOLID principles, and SDLC practices; reduced production incident-resolution time by 60% through root-cause analysis and monitoring.
- Applied automated testing, Git workflows, CI/CD, technical documentation, and deployment support to maintain reliable delivery and drive continuous improvement.
- Built Playwright end-to-end tests with the Page Object Model and mocked authentication to validate complete application workflows.
- Integrated Azure OpenAI into backend services and structured responses into generated content, quality scores, and recommendations; optimized prompts to reduce token usage by approximately 30%.
- Remediated 10+ OSS/npm dependency vulnerabilities flagged by security scanning and used automated component-governance pull requests to streamline remediation.

Project: Microsoft.com Website - Application Security & Quality

- Hardened 20+ frontend components against XSS, including resolving unsafe context escaping in shared AEM templates.
- Created 100+ unit tests and automated Playwright regression testing, reducing manual QA effort by approximately 60%.
- Collaborated on accessible, responsive TypeScript components and technical quality improvements for Microsoft.com content experiences.

Senior Software Engineer, Graffitecs Solutions

2023 - 2024

Projects: Community Facilities Planning Calculator, The Gate & Three60

- Led six frontend engineers on a cloud-based planning calculator, gathering business requirements and coordinating delivery with backend and UI/UX teams.
- Replaced an Excel-based planning workflow with a SaaS calculator, improving planning and calculation speed by 50%.
- Built a configurable approval-workflow experience supporting 20+ templates, allowing administrators to define steps, roles, and conditions without developer involvement.

- Owned Three60 delivery from planning through execution with a four-person team; implemented Jest and React Testing Library coverage exceeding 90% on core components.
- Reviewed 20+ pull requests per month, mentored three engineers, and maintained technical documentation across projects.

Senior Software Engineer / Frontend, ILI Digital

2022 - 2023

Projects: BASF Battery Recycling (with BMW) & mcyclo

- Developed 10+ application pages supporting recycling orders across BMW Dealer, BASF Logistics, and BMW OEM roles; helped fully automate the previously manual process.
- Built and maintained TypeScript, React.js, and Next.js applications with Redux, unit tests, and integration tests using Jest and React Testing Library.
- Investigated technical issues, performed code reviews, maintained documentation, and optimized page-load performance by approximately 25%.

Software Engineer / Frontend Developer, Nextbridge (Pvt) Ltd

2021 - 2022

- Built and maintained 10+ AWS Lambda serverless functions using DynamoDB, S3, and EC2-hosted services, supporting application infrastructure for 5,000+ monthly users.
- Maintained production React applications, resolved 50+ bugs, and updated dependencies across three repositories.
- Collaborated with a cross-functional team of 6+ to design, develop, and deploy applications; contributed documented code and constructive peer reviews.

EDUCATION

University of the Punjab | 2018

Bachelor of Business and Information Technology

CERTIFICATIONS

- Scrum Fundamentals Certified (SFC) - SCRUMstudy
